

VEEAM BACKUP FOR MICROSOFT AZURE.

Most companies today use at least one purpose-built backup program on-premises for their resilience. Nevertheless, many businesses rely on built-in capabilities for recovery, making them vulnerable as more programs and data restructure and migrate to IaaS, PaaS, and SaaS.

Veeam Backup for Microsoft Azure provides native backup for Azure Virtual Machines, Azure SQL, Azure Files, and more. By integrating Veeam with your Azure infrastructure, you can set policies, retention times, and encryption (including passwords handled by Azure Key Vault) and enable Immutable Storage using configuration techniques that were specifically designed for this purpose. You don't have to pay the ransom in the case of a ransomware attack. To continue working, simply restore your impenetrable backup to production. Levelling up with Veeam is very easy whether you're a Veeam user or a new one.

Veeam is the leader in backup, recovery, and data management solutions that deliver Modern Data Protection. They provide a single platform for cloud, virtual, physical, SaaS, and Kubernetes environments. Veeam Platform is the most complete data protection solution for all data — whether deployed on-premises, in the cloud, or through Backup as a Service (BaaS) or Disaster Recovery as a Service (DRaaS). Veeam Platform is designed to accelerate business agility by providing a single platform for cloud, virtual, physical, SaaS, and Kubernetes data management and protection that extends beyond core backup and recovery, addressing the most critical business challenges.

IBSCY Ltd is an official partner of Veeam in Cyprus and has experience in setting up Veeam backup and Veeam products with certified presales and certified technicians.
